DEFRA (Ref: MO43) For Weather Forecast Planning Issued on Saturday, 26 March 2022 at 00:45 local time

Air Quality Forecast for the UK

Issued by the Met Office

Today: Southern UK and areas bordering the Irish Sea are likely to see widespread Moderate and perhaps locally High levels of air pollution in the prevailing light wind from the Continent, with settled conditions also allowing for a biuld-up of locally-generated pollutants. By contrast, much of northern UK should see mainly Low air pollution levels.

Tomorrow: Air pollution levels should generally improve, with more isolated areas of Moderate air pollution generally becoming confined to western UK, and with mainly Low air pollution elsewhere.

Outlook: Air pollution levels should become mainly Low, with the gradual onset of more unsettled conditions. Western areas will be perhaps most prone to further localised Moderate air pollution.
